TITLE

ANNEXIN AND P34 PROMOTERS
AND USE IN EXPRESSION OF TRANSGENIC GENES IN PLANTS

ABSTRACT OF THE DISCLOSURE

A seed specific plant annexin and P34 promoters and subfragments thereof and their use in promoting the expression of one or more heterologous nucleic acid fragments in plants are described.

A seed specific plant annexin and P34 promoters and subfragments thereof, recombinant expression construct comprising these promoters and their use in driving seed-specific expression of one or more heterologous nucleic acid fragments, such as heterologous nucleic acid fragments encoding reporter constructs or enzymes related to production of fatty acids in plants are described.
